

Software Engineer specializing in the development of **scalable SaaS infrastructures**. Expert in the **Python ecosystem (Django, Flask)** and in designing high-complexity **RESTful APIs**. Proven track record leading end-to-end platform development, integrating third-party services to automate legal, financial, and corporate identity processes.

EXPERIENCE

Full-Stack Developer | FundaSalud (G.D.C.), *Centralized Health Management Platform*
(Aug, 2024 – Dec, 2024)

- **System Design & Implementation:** Designed and implemented a comprehensive system for patient management and medical record digitization, centralizing healthcare information across multiple locations.
- **Inventory Control Module:** Developed an automated module for medical supplies and asset inventory, focusing on real-time stock tracking and efficient resource distribution between branches.

Backend Developer | Marcasoon, *Intellectual Property Platform* (Oct, 2025 – Dec, 2025)

- **API Design & Automation:** Designed and implemented external APIs for automated registration, availability checks, and real-time verification of trademarks and intellectual property assets.
- **Validation Engine:** Developed an asset search and validation engine, ensuring high data precision and secure handling of sensitive legal information.

Full-Stack Developer | TaskUp, *Subscription & Onboarding Platform* (Dec, 2025 – Jan, 2026)

- **Automated Notifications:** Developed an automated notification system triggered by successful purchase events to enhance user engagement.
- **Onboarding Integration:** Integrated dynamic onboarding flows via email service APIs and subscription management systems.

Full-Stack Developer / Technical Lead | Bhealth Insurance, *Centralized Insurance Management Project* (Jan, 2026 – Jul, 2026)

- **Full-Stack System Architecture:** Designed and built a feature-complete management and mass enrollment platform.
- **Production-Ready Delivery:** Engineered optimized database schemas for sensitive health insurance data and delivered a fully functional, production-ready system meeting all client specs prior to project sign-off.

SKILLS

- **Languages:** Python (Django/DRF, Flask), JavaScript, C++.
- **Backend & APIs:** Microservices architecture, third-party API integration (verification, payments, notifications).
- **Infrastructure:** AWS, Docker, Git / GitHub, CI/CD.
- **Databases:** SQL (MySQL), query optimization, and relational database design.
- **SaaS Consulting:** Workflow automation, digital asset security, and scalability.

ADDITIONAL COMPETENCIES

- **Languages:** Spanish (Native) | English (Conversational/Professional).
- **Consulting Focus:** Proven ability to analyze business challenges and translate them into efficient, automated technical solutions.
- **Leadership:** Experienced in high-stakes technical decision-making and managing the full Software Development Life Cycle (SDLC).

EDUCATION

- **B.S. in Informatics Engineering** | Universidad Alejandro de Humboldt | *2022 – Present*
- **Technical Certifications (Platzi/Udemy):**
 - Backend Development with Python and Django.
 - Software Architecture and Object-Oriented Programming.
 - Server Management and Cloud Deployment.
 - Version Control with Git and GitHub.
